## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. How is the top portion in electrical contact with the tank neck (see fig. 1)?

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-17 and 20-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Hagano et al. (5,992,670). Hagano et al. discloses the limitations of the claims including a tank closure apparatus (figs. 1-37) comprising a gas tank cap (10) including a closed top portion (40), a cylindrical portion (43), at least one projection (46), all of which are made from of a conductive plastic/polyamide (col. 13, line 58), elevated grip flange (42), contact projection being molded onto said cylindrical portion (fig. 16) and extending in a direction perpendicular to a major plane of the closed portion, first

end (fig. 16, portion closest structural feature noted by reference number 45), second end (portion furthest away from structural feature noted by reference number 45) chamfered upward, plurality of projection positioned diametrically opposite one another (fig. 17) extending inward from the cylindrical portion, threaded tank neck is inherent, engagement part (fig. 2, 22) having second thread,

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hagano et al. ('670) in view of Griffin et al. (6,508,374). Hagano et al. discloses the limitations of the claim excluding a projection with leaf spring properties. However, Griffin et al. teaches a projection with leaf spring properties for the purpose of facilitating resilient contact with a filler neck. Therefore it would be obvious to one having ordinary skill in the art at the time of invention to have modified Hagano et al. with a projection with leaf spring properties in order to provide resilient contact with a filler neck.

### ***Allowable Subject Matter***

Claim 18 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
